A large, medium strong, slightly compact bitch of still good type. Slightly erect head carriage, high withers, firm back, slightly short slightly steep croup. The upper arm could be longer and better angled, the shoulder blade is slightly forward placed, very good hind quarter angulation. Stands correct in front, slight bowing of the lower arm, slightly upright pasterns. Still good head, medium eye colour, good masking, where both the skull and the foreface should be stronger. The forechest should be more developed, short underchest with excessive tuck up. Steps narrow both front and rear. During movement shows good ground covering gait where the hindquarter thrust should be more powerful and the forehand reach more expansive. The very short underchest detracts from the overall picture of the bitch the tail also should be carried in a more natural manner. Slightly over excitable in character.
